Webinar: Reducing Maternal Mortality in Northern Nigeria – The Role of Technology, Policy and Community Leadership

Every day, women across Northern Nigeria continue to face preventable risks during pregnancy and childbirth. Despite significant progress in maternal health globally, Nigeria remains one of the countries with the highest maternal mortality burden. According to the World Health Organisation, Nigeria accounts for nearly 20% of global maternal deaths, with

an estimated 512 maternal deaths per 100,000 live births. In some parts of Northern Nigeria, this figure is even higher due to disparities in access to healthcare services.

Many of these deaths result from preventable causes such as severe bleeding, infections, hypertensive disorders, unsafe abortions, and limited access to quality maternal healthcare. It is estimated that over 60% of births in Northern Nigeria occur outside health facilities, often without the presence of skilled birth attendants. Additionally, fewer than 50% of pregnant women receive the recommended minimum of four antenatal care visits, further increasing the risk of complications during pregnancy and childbirth.

These challenges are compounded by malnutrition, shortages of skilled health workers, weak referral systems, and inequitable access to essential health services. Acute malnutrition remains a major public health concern across Northern Nigeria, where approximately 2 million children suffer from severe acute malnutrition annually, and millions more experience moderate malnutrition. Poor maternal nutrition contributes significantly to adverse pregnancy outcomes, including low birth weight, childhood stunting, and increased maternal and neonatal mortality.

Addressing these interconnected challenges requires more than healthcare interventions alone; it demands stronger policies, strategic partnerships, community leadership, and innovative approaches that improve access to quality care.

At **InnoHealth Technologies**, we believe that lasting solutions emerge when researchers, policymakers, healthcare professionals, development partners, technology innovators, and communities come together to share knowledge and develop practical actions. It is with this commitment that we are pleased to host our upcoming webinar:

Reducing Maternal Mortality in Northern Nigeria: The Role of Technology, Policy and Community Leadership

Date: Saturday, 4 July 2026

Time: 10:00 AM – 11:00 AM (BST/WAT)

Platform: Microsoft Teams

This webinar will provide a platform for meaningful discussions on how technology, evidence-informed policymaking, public-private partnerships, and community engagement can collectively help reduce maternal mortality and improve nutrition outcomes in Northern Nigeria.

Featured Speakers

Dr. Regina Murphy Keith, PhD, FRCN

Reader in Global Public Health Nutrition
Course Leader, MSc Global Public Health Nutrition
University of Westminster, London

Dr. Regina Keith is an internationally recognised public health nutrition specialist with more than four decades of experience across 56 countries. She will deliver the keynote address focusing on:

The Role of Policy Development and Public-Private Partnerships in Reducing Acute Malnutrition and Maternal Mortality in Northern Nigeria

Drawing on her extensive experience supporting maternal, newborn and child health programmes, Dr. Regina Keith will share practical lessons on strengthening health systems, improving nutrition, and translating evidence into effective policy.

Yusuf Hassan Wada, MPH

Policy and Advocacy Officer (African Region)
Society for Family Health

Yusuf Hassan Wada is a pharmacist, public health professional, researcher, and policy advocate with extensive experience in health systems strengthening across Africa. His work spans policy development, advocacy, universal health coverage, HIV research, and community engagement. He has published over 30 peer-reviewed papers, including in *The Lancet*, and has presented his work at international conferences and the United Nations General Assembly.

He will discuss practical approaches to strengthening maternal health through policy, partnerships, and community leadership.

Moderator

Anne Amina Freitas

Anne is a researcher and data scientist pursuing an MSc in Model-Based Drug Development at the University of Manchester as a Chevening Scholar, alongside a Master of Public Health (Epidemiology) at Ahmadu Bello University. Her research focuses on artificial intelligence, quantitative modelling, and data science for healthcare. She is also the Founder of the AI Health Research and Innovation (AIRI) Hub.

Anne will moderate the discussions and facilitate an engaging conversation between our speakers and participants.

Who Should Attend?

This webinar is suitable for:

- Healthcare professionals

- Public health practitioners
- Researchers and academics
- Students
- Nutritionists and dietitians
- Policymakers
- Development partners
- Civil society organisations
- Community leaders
- Anyone interested in improving maternal and child health outcomes in Nigeria

Register Today

Participation is free; however, registration is required.

Register here:

<https://forms.gle/fDdp4hNjgfZKfr317>

A confirmation email containing the Microsoft Teams joining link will be sent automatically after successful registration.

We look forward to welcoming you as we explore practical, evidence-informed solutions to reduce maternal mortality and improve maternal and child health outcomes across Northern Nigeria.
